

Summer School Program

Overview

The Summer Program is designed to provide children an environment where they can enjoy fun and exciting activities while learning and practicing English language. It is also a great chance for new and potential students to get acclimatized to the school environment and facilities as well as meet and work with members of the teaching and administrative staff.

During the summer school, students will focus on different themes each week which are educational, interesting and engaging. Children will experience various activities related to the theme of the week, such as listening to stories, doing arts & crafts, experiments, singing songs and playing games. Depending on the weather conditions on designed days, children will have the opportunity to have water activities.

The school will arrange specially designed arts & craft room, computer room, board games room and water play area to make summer school more enjoyable for the students.
